Im Rahmen des Workshops „Interdisciplinarity“

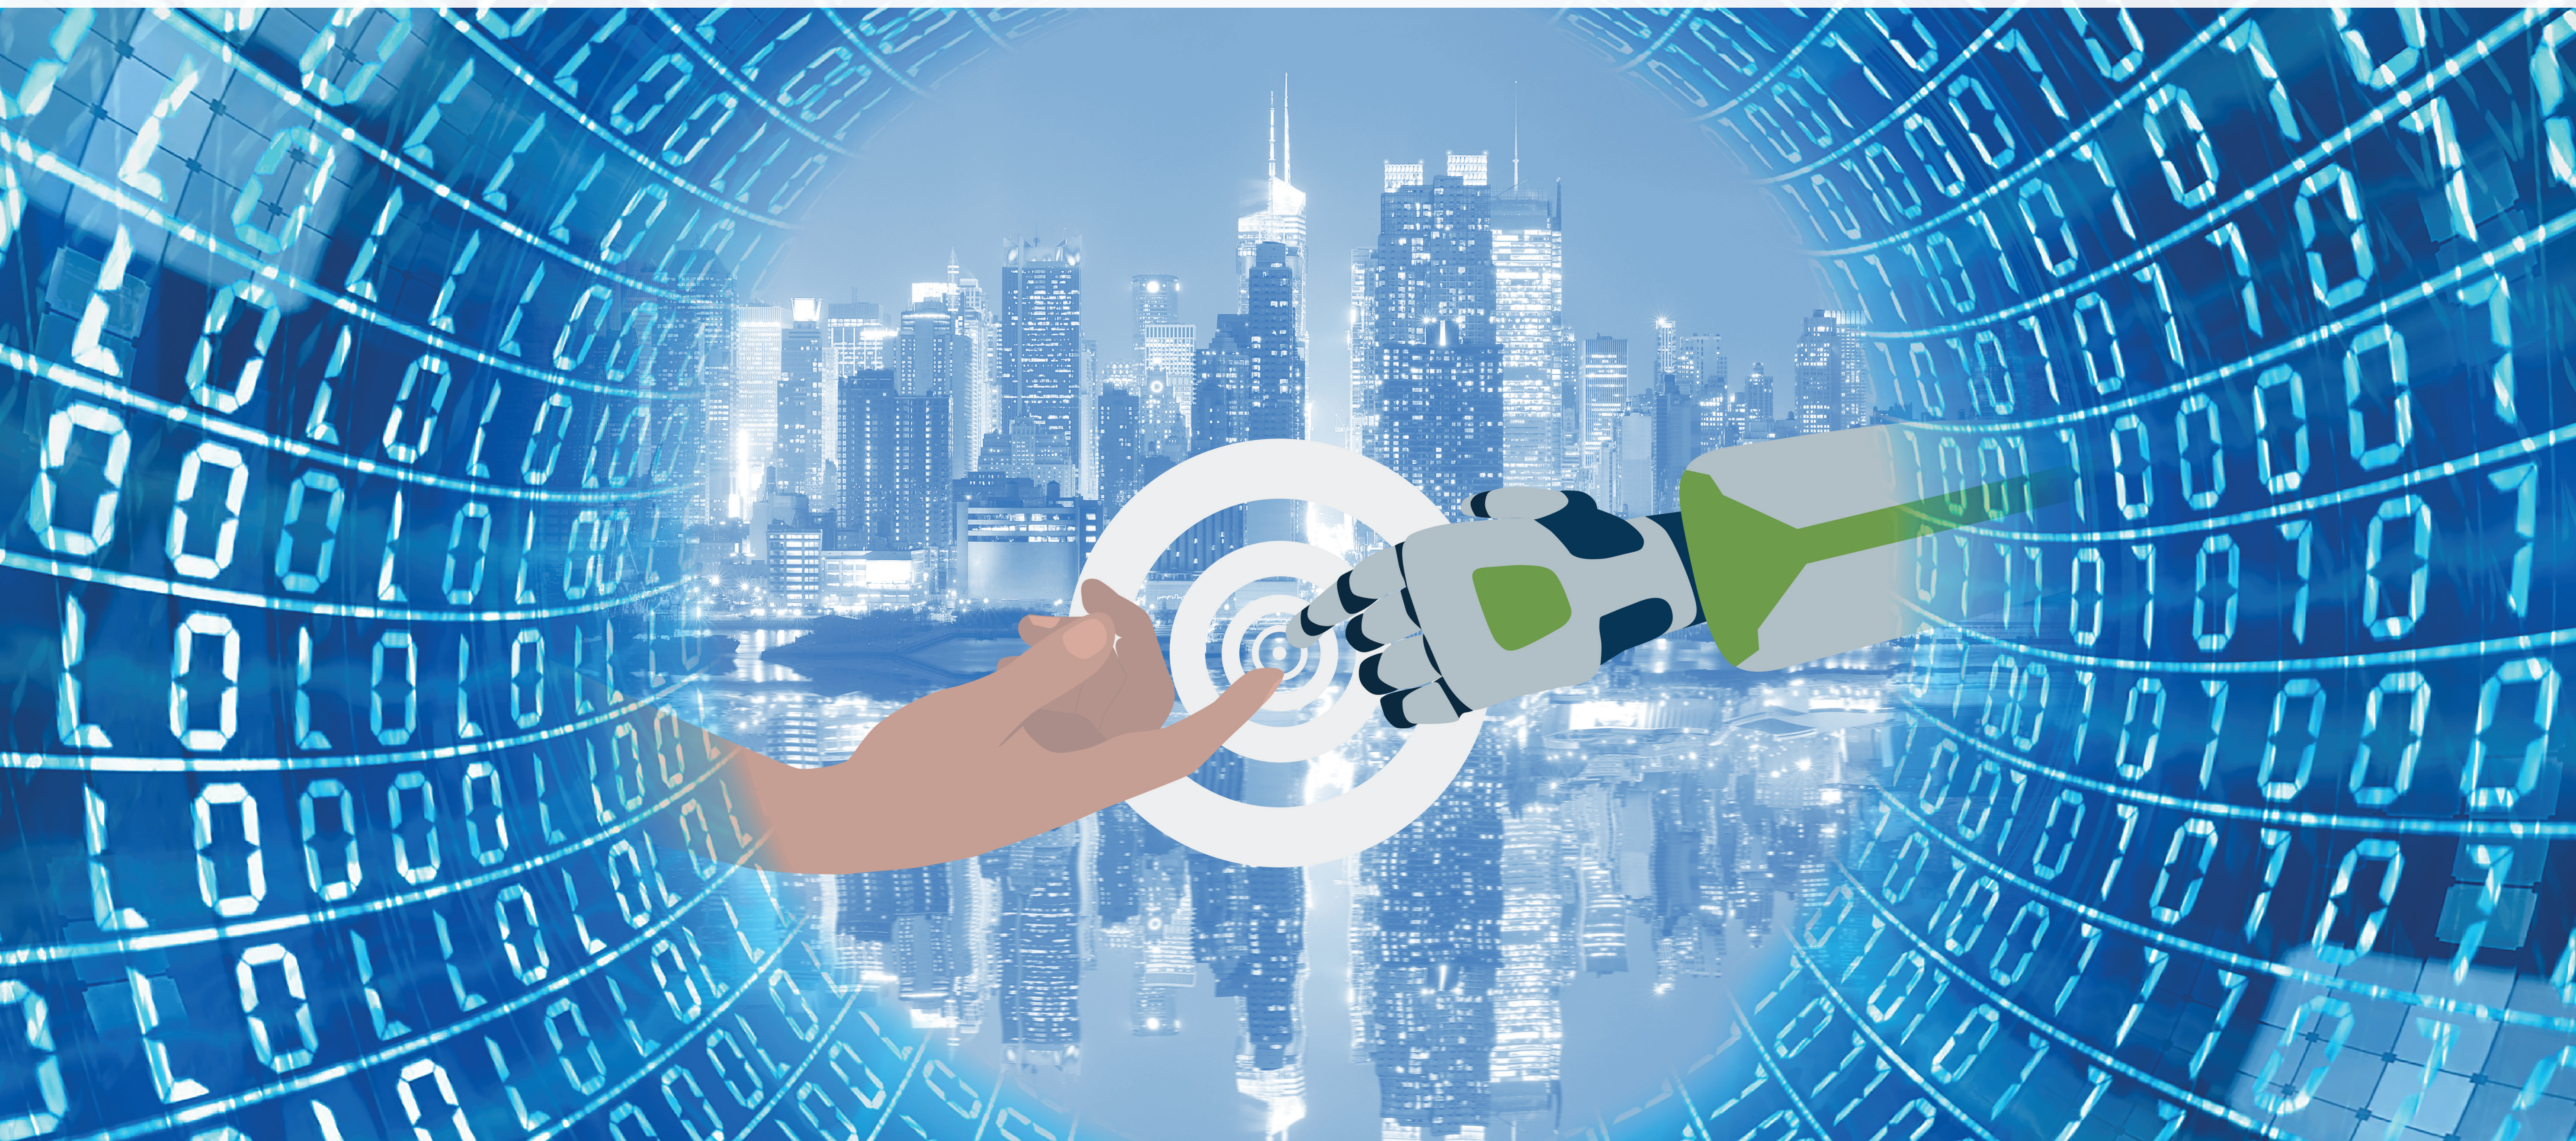

Public Keynote

What is an Interdisciplinary Problem?

Prof. Dr. Andrew Barry, UC London

Date: Friday, May 10th 2019, 11 am

Location: Building ID, Room 04/653, Ruhr University Bochum

Abstract:

The study of data and security generates interdisciplinary problems, which are never quite amenable to merely technical solutions. This lecture considers the way in which the work of anthropologists and artists, as well as legal scholars, political theorists and economists, can and should contribute to the analysis of data and society. The lecture dwells, in particular, on the relation between pressing demands for security, and expectations and performances of transparency and openness.
